

Quick Start Guide

Generate your first AI hairstyle in about a minute. From the top menu, click **Visualize** to begin.

Start with Setup

1 Select or create a client

Every look is saved to a client, so start here. **Click Create Client** and enter a first and last name (anything works — it's just a label).

2 Review consent

Click **Show** to read the consent notice, then check the box to confirm. This stays active for 48 hours, so you won't be asked again for the same client during that time.

3 Add a photo

Take a photo or upload one from your device. You only need to do this once per client — next time, reuse it with **Choose from Gallery**. For best results use a clear, front-facing photo.

Now the fun part

Steps 1–3 are setup. Everything below is how you define the style — mix and match these options, or use just one.

Then define the style

4 Define the style

Get AI Recommendations — Analyzes the client's face and suggests flattering styles. Tap **Try this Style** on any suggestion to generate it instantly.

Upload Reference — Add a photo of a hairstyle you like. Scroll down and tap **Generate New Look**, and the AI applies that style to your client's photo.

Presets — Tap any preset to select it. Works like a reference photo, but the style is already defined for you.

Choose a Hair Color — Tap to open the color menu and pick any shade.

- *Combine it with a reference or preset* to apply that color to the chosen style.
- *Use it alone* (photo + color, nothing else) to simply recolor the client's current hair.

Or describe a style from scratch — Type any description and it's applied to the generated look. You can skip every option above and just describe what you want.

- *Tip:* Once you select a preset, this field becomes **"Add details to refine this style."** Example: with French Bob selected, type here to change the length, add bangs, adjust color, and so on.

When you're ready, tap **Generate New Look**

The Results

See your client's before and after side by side. From here you can:

Download

Save the AI photo to your device.

Get AI Consultation

The AI reviews the new look and gives feedback and suggestions.

Save Look

Store the result under the client's name, where you can add notes and tags.
